

BookNook

BOOKS & STATIONERY

Books & Stationery E-Commerce Website — Project Report

Project Introduction

BookNook is a modern, responsive online bookstore and stationery shopping website designed to provide users with a clean and engaging browsing and shopping experience. Visitors can explore books and stationery, search and filter products, view detailed product pages, manage a wishlist and cart, proceed through checkout, and interact with account and contact features.

Project Objective

To design and develop a fully responsive e-commerce platform that delivers an elegant, editorial-style shopping experience for books and stationery, combining intuitive product discovery with a smooth cart-to-checkout journey — all built using front-end web technologies and browser-based data persistence.

Project Details

Project Name	BookNook – Books & Stationery
Project Type	Responsive E-Commerce Website

Product Detail View

Website Highlights

BookNook brings together thoughtful design and functional depth to create a premium, editorial shopping experience across every screen size.

Responsive Design

The interface adapts seamlessly across desktop and mobile, maintaining a consistent visual identity with a dedicated mobile navigation experience.

Product Discovery

Users can search, sort, and filter the catalog by category, price, customer rating, and language, with a detailed product view showing publisher, ISBN, language and page-count information.

Wishlist, Cart & Checkout

Items can be saved to a wishlist or added to a persistent shopping cart, which calculates subtotal, shipping and GST in real time before guiding users through address and payment selection to complete their order.

Interactive Functionality

An account dashboard, contact form, and newsletter subscription round out the experience, with all cart and wishlist data persisted locally in the browser using Local Storage.

Project Overview

Conclusion

The BookNook project successfully delivers a modern, responsive, and user-friendly bookstore experience — combining an elegant editorial design with practical e-commerce functionality such as filtering, wishlist, cart management and checkout, all powered by vanilla JavaScript and browser-based data storage.
